Mirror order: HUD glasses

Show this page to the glass shop · Charan · drawn diagram, not a photo

True-size template

25 × 30 mm

Print at **100 %** (not "fit to page"). Check with a ruler: 25 mm wide.

Flat, plain silver glass mirror. No frame. Drawn 5× real size.

What to ask for

Item	Value	Why
Type	Plain glass mirror, silver (not tinted / bronze / grey)	Bright, true reflection
Size	**25 mm × 30 mm** (2.5 × 3.0 cm)	Fits the housing slot
Tolerance	±0.5 mm, square 90° corners	Sits snug at 45°
Thickness	**Thinnest available: 2 mm** (not 4–5 mm)	Thick glass = double image
Flatness	Flat, not curved / convex	Curve stretches the text
Surface	No scratches, no bubbles, silver backing intact	Spots show in the HUD
Edges	Lightly smoothed (ground)	Safe to handle, no chips
Backing	No frame, no stand, no glue	Mounted in the 3D-printed housing
Quantity	**3 pieces** (1 + 2 spare)	Thin glass breaks easily
Packing	Wrapped in paper or foam	Protects the surface
Price	About ₹20–50 total	Fair price check

Bonus: ask for a **"front-surface mirror"** (silver on the front, no double image). Most shops won't have it, and plain 2 mm is fine.

Check at the counter

- Lay each piece on the template: same size, corners square.
- Hold it near your eye and look at a straight edge: one sharp line, no double edge.
- Hold it by the edges only.
